

## Product Comparison

## Advantages & cost savings against traditional solar lights ▼

### Procurement savings

**More units for less cost.** Truelite smart solar street light has just 2 components – the light head and the solar panel - against traditional solar lights with separate batteries, battery boxes, charge controller and casing, cables, connectors and accessories. Additional benefits in ordering, by avoiding the complication of multi-component purchasing and integration.

### Faster turnaround time

Faster production, delivery and installation.

### Installation costs

70% cost savings on installation and set-up.

Truelite smart solar street light can be easily set up with just a single MC4 plug connecting the light head and the panel and huge cost savings on battery boxes, associated civil works, and the fixing of charge controllers.

### Logistics and warehousing savings

### Maintenance free and vandal proof built

There is no maintenance required for the lights and batteries, and no ground-based components.

### Unmatched 5 years warranty

Truelite will replace any unit, that is found to be defective due to manufacturing failures.
